1. Absolute Maximum Ratings

Item	Contents	Unit
LCD Type	a-Si TFT-Color Transmissive LCD	-
Display Format	Transmissive type	-
Display color	262K colors	-
Input Data	8-bit 80 System Parallel Interface	-
Viewing Direction	12 O'CLOCK	-
Backlight	White(4x LED)	-
Driver IC	ILI9341	pixel
Resolution	240(RGB)(W) x 320 (H) pixels	-
Dimensional outline	42.7 (W)x 60.26(H) x 2.25 (T)(without FPC)	mm
Active area	36.72(W) x48.96 (H)	mm
Pixel Pitch	0.153(W)x 0.153(H)	mm
Diagonal length	2.4 “	inch
Operating Temp.	-20℃ ~ + 70℃	℃
Storage Temp.	-30℃ ~+ 80℃	℃

由 Autodesk 教育版产品制作

3.1 Absolute Mixmum Ratings(Ta=25°C)

Characteristics	Symbol	Min	Max	Unit	Remarks
Power supple voltage(1)	VCC	-0.3	4.6	V	(1),(2)
Power supply voltage(1)	VCI-GND	-0.3	+4.6	V	(1),(2)
Power supply voltage(1)	VGH-GND	-0.3	+18.5	V	(1)
Power supple voltage(1)	GND-VGL	-0.3	+18.5	V	(1)
Power supply voltage(1)	DDVDH	-0.3	+6.0	V	(1)

Note:

- (1) If the LSI is used above these absolute maximum ratings, it may become permanently damaged. Using the LSI within the following electrical characteristics limit is strongly recommended for normal operation. If these electrical characteristic conditions are also exceeded, the LSI will malfunction and cause poor reliability.
- (2) $V_{cc} \geq GND$ must be maintained.
- (3) $DDVDH \geq GND$ must be maintained.

3.2 Environmental absolute maximum ratings

ITEM	SPECIFICATION	REMARKS
Operating Temp.	-10 ~ 60 °C	Note(1)
Storage Temp.	-20 ~ 70 °C	Note (1) , (2)

Note:

- (1) 90% RH Max
- (2) In case of below 0°C, the response time of liquid crystal (LC) becomes slower and the color of panel becomes darker than normal one.

3.ELECTRICAL CHARACTERISTICS**3.1DC characteristics**

Item	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply voltage	V_{CC}		2.7	2.8	2.9	V
Input voltage	H level (VIH)		0.8VCC	-	V_{CC}	V
	L level (VIL)		-0.3	-	0.2V _{cc}	V
Supply current	I_{cc}	Without LED VCC=2.8V		4		mA

3.2 DC characteristics of the LED back-light $T_a = 25^\circ\text{C}$

Item	Symbol	Min.	Typ.	Max.	Unit
LED module Forward voltage	V_{LED}	3.0	--	3.4	V
LED module current	I_{LED}	--	80	--	mA
Luminance	L_v	3300	-	-	Cd/m ²

Note: 4 LEDS in parallel of B/L module.

1 Test condition is: a:Center point on active area b:Best Contrast

2 Uniform measure condition:

a:Measure 9 point,Measure location is show below:

b:Uniform=(Min brightness/Max.brightness)x100% c:Best Contrast.

4.INTERFACE PIN CONNECTION

REFER TO DRAWING

5.ELECTRO-OPTICAL CHARACTERISTICS

No	Item		Symbol	Measuring Conditions		Min.	Typ.	Max.	Unit	Remark
1	Response Time	Rise	Tr	$\theta = 0^\circ$ $\phi = 0^\circ$	25 °C		25		ms	Note (a)
		Fall	Tf	$\theta = 0^\circ$ $\phi = 0^\circ$	25 °C		25			
2	Viewing Angle (CR ≥ 10)		θ	$\phi = 0^\circ$	25 °C	45	50	-	Deg	Note (b)
				$\phi = 180^\circ$	25 °C	15	20	-		
			θ	$\phi = 90^\circ$	25 °C	40	45	-		
				$\phi = 270^\circ$	25 °C	40	45	-		
3	Contrast Ratio		CR	-	25 °C		300	-	-	Note (c)
4	Color of CIE Coordinate		White	X	25 °C	0.287	0.307	-	-	-
				Y	25 °C	0.315	0.335	-		
			Red	X	25 °C	0.624	0.644	-		
				Y	25 °C	0.326	0.346	-		
			Green	X	25 °C	0.285	0.305	-		
				Y	25 °C	0.561	0.581	-		
			Blue	X	25 °C	0.115	0.135	-		
				Y	25 °C	0.116	0.136	-		
5	Transmittance (without polarizer)		--	--		6.5	--	-	%	-

<Transmissive Mode>

FIG. 1 Optical Characteristic Measurement Equipment and Method

P1-P8: Main Measuring point

Fig. 2 Measuring Points

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

FIG.3 The definition of Response Time

7.QUALITY ASSURANCE

7.1Acceptable Quality Level (AQL)

Each lot should satisfy the quality level defined as follows:

- a) Inspection method: MIL-STD-105E Level II normal one time sampling
- b) AQL level

Category	AQL	Definition
Major	0.25%	Functional defective as product
Minor	1.00%	Satisfy all functions as product but not satisfy cosmetic standard

8.2Cosmetic Screening Criteria

No	Defect	Judgment Criteria			Category
1	Spots/Dust /Bubble (Round type)				Minor
		Size, d (mm)	Acceptable quantity in active area		
		$d \leq 0.15$	Disregard		
		$0.15 < d \leq 0.20$	3		
		$d > 0.20$	0		
2	Spots/Dust /Bubble /Scratches (Line type)	Width, W (mm)	Length, L (mm)	Acceptable quantity in active area	Minor
		$W \leq 0.02$	Disregard	Disregard	
		$W \leq 0.03$	$L \leq 1.0$	Disregard	
		$W \leq 0.05$	$L \leq 2.0$	3	
		$W > 0.05$	Disregard	0	
3	Background color & Rainbow	Not to be noticeable.			Minor
4	Allowable density	Above defects should be separated more than 30mm each other.			Minor
6	Coloration	Not to be noticeable coloration in the viewing area of the LCD panels. Back-lit type should be judged with back-lit on state only.			Minor
7	Rainbow	Not to be noticeable.			Minor
8	Dot size	To be 95% ~ 105% of the dot size (Typ.) in drawing. Partial defects of each dot (ex. pin-hole) should be treated as ‘spot’. (See <i>Cosmetic Screening Criteria (Operating) No.1</i>)			Minor

Note: $d = (\text{long length} + \text{short length}) / 2$

8. PRECAUTIONS FOR USING LCD MODULE

8.1 Handling Precautions

- 8.1.1 The display panel is made of glass and polarizer. Do not subject it to mechanical shock by dropping or impact which may cause chipping especially on the edges.
- 8.1.2 Do not touch, push or rub the exposed polarizers with anything harder than an HB pencil lead (glass, tweezers, etc.). The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 8.1.3 If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten cloth with Isopropyl alcohol or ethyl alcohol. Avoid using solvents like acetone (ketene), water, toluene, ethanol to clean the polarizer surface.
- 8.1.4 Please keep the temperature within specified range for use and storage. Polarization degradation, bubble generation or polarizer peel-off may occur with high temperature and high humidity.
- 8.1.6 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- 8.1.7 Install the LCD Module by using the mounting holes. When mounting the LCD module make sure it is free of twisting, warping and distortion.
- 8.1.8 Exercise care to minimize corrosion of the electrode. Corrosion of the electrodes is accelerated by water droplets, moisture condensation or a current flow in a high-humidity environment.
- 8.1.9 NC terminal should be open. Do not connect anything.
- 8.1.10 If the logic circuit power is off, do not apply the input signals.
- 8.1.11 Avoid contacting oil and fats.
- 8.1.12 Condensation on the surface and contact with terminals due to cold will damage, stain or dirty the polarizers. After products are tested at low temperature they must be warmed up in a container before coming in contact with room temperature air.
- 8.1.13 Wipe off saliva or water drops immediately, contact with water over a long period of time may cause deformation or color fading.

8.2 Electro-Static Discharge Control

- 8.2.7 Since this module uses a CMOS LSI, the same careful attention should be paid to electrostatic discharge as for an ordinary CMOS IC.
- 8.2.8 Be sure to ground the body when handling the LCD modules. Tools required for assembling, such as soldering irons, must be properly grounded.
- 8.2.9 To reduce the amount of static electricity generated, do not conduct assembling and other work under dry conditions. To reduce the generation of static electricity, be careful that the air in the work is not too dried. A relative humidity of 50%-60% is recommended.
- 8.2.10 The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.
- 8.2.11 When soldering the terminal of LCM, make certain the AC power source for the soldering iron does not leak.

8.3 Precaution for soldering to the LCM

- 8.3.7 Observe the following when soldering lead wire, connector cable and etc. to the LCD module.

8.4 Soldering iron temperature: $300 \pm 10^{\circ}\text{C}$.

- 8.4.7 Soldering time: 3 sec.
- 8.4.8 Solder: eutectic solder.
- 8.4.9 If soldering flux is used, be sure to remove any remaining flux after finishing to soldering operation. (This does not apply in the case of a non-halogen type of

flux.) It is recommended that you protect the LCD surface with a cover during soldering to prevent any damage due to flux spatters.

8.5 Precautions for Operation

- 8.5.7 Viewing angle varies with the change of liquid crystal driving voltage (V_O). Adjust V_O to show the best contrast.
- 8.5.8 Driving the LCD in the voltage above the limit shortens its lifetime.
- 8.5.9 Response time is greatly delayed at temperature below the operating temperature range. However, it will recover when it returns to the specified temperature range.
- 8.5.10 If the display area is pushed hard during operation, the display will become abnormal. However, it will return to normal if it is turned off and then back on.
- 8.5.11 When turning the power on, input each signal after the positive/negative voltage becomes stable.

8.6 Storage

- 8.6.7 When storing LCDs as spares for some years, the following precautions are necessary.
- 8.6.8 Store them in a sealed polyethylene bag. If properly sealed, there is no need for desiccant.
- 8.6.9 Store them in a dark place. Do not expose to sunlight or fluorescent light, keep the temperature between 0°C and 35°C.
- 8.6.10 Environmental conditions:
- 8.6.11 Do not leave them for more than 168hrs. at 60°C.
- 8.6.12 Should not be left for more than 48hrs. at -20°C.

8.7 Safety

- 8.7.7 It is recommended to crush damaged or unnecessary LCD into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.
- 8.7.8 If any liquid leaks out of a damaged glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

9. Limited Warranty

I-DEVELOPED modules are not consumer products, but may be incorporated by I-DEVELOPED's customers into consumer products or components thereof. I-DEVELOPED does not warrant that its LCD's and

Components are fit for any such particular purpose.

1. The liability of I-DEVELOPED is limited to repair or replacement on the terms set forth below.
I-DEVELOPED will not be responsible for any subsequent or consequential events or injury or
Damage to any personnel or user including third party personnel and / or user.
Unless otherwise agreed in writing between I-DEVELOPED and the customer, I-DEVELOPED will only
Replace or repair any its LCD which is found defective electrically or visually when
Inspected in accordance with I-DEVELOPED LCD acceptance standards for a period of
three
Months from the date of shipment. Confirmation of such date shall be based on freight
Document.
2. No warranty can be granted if any of the precautions stated in LCD modules above have
Been disregarded. Broken glass, scratches on polarizers, mechanical damages as well as
Defects that are caused by accelerated environmental tests are excluded from warranty.
3. In returning the LCD modules, they must be properly packaged and there should be detailed
Description of the failures or defects.

10. Important Notice

The information presented in this specification has been carefully checked and is believed to be
Accurate, however, no responsibility is assumed for inaccuracies. I-DEVELOPED reserves the
right to

Make changes to any specifications without further notice for
performance, reliability, production

Technique and other considerations. I-DEVELOPED does not assume any liability arising out of
the

Application or use of products herein. Please see Limited Warranty in the previous section.
